

# Next generation sequence data analysis, 6th edition

Jeroen Laros, Wilfred van IJcken, Judith Boer, Johan den Dunnen

**Molecular Medicine**  
Postgraduate School

The special course “Next Generation Sequencing (NGS) Data analysis” has been organized for 5 times by MGC at the LUMC, Leiden. The 6th issue of the course will be organized at Erasmus MC by MolMed, in close cooperation with MGC, from September 11–13, 2012. The program will be more or less identical to the one of 2011.

The course aims at PhD students, postdocs and senior researchers who are interested in, planning, or already working with next-generation sequencing. Currently available technologies as well as hardware and software solutions will be presented and discussed. The focus of the course will be on the data and ways to analyse the data.

**Registration** We only have facilities to accommodate 60 participants. All registrants have to send a motivation in the free text field of this web form. Important are your experience in this field and the data you have. When we get more registrations before the deadline (July 1st) we have to make a selection. In this case, we will inform you before July 10th.

**Costs** PhD students from the MGC/Molmed are free of charge, other persons from the academic world pay €250 euro and €500 euro per person for corporate participants.

Registration can be done through the link at <https://www.molmed.nl> where you also can find the tentative program.

**Organisation** This year, the course will be organised by:

- Molmed (Frank van Vliet).
- MGC (Madeleine Nivard).
- LUMC (Jeroen Laros).

**Sponsors** Other sponsors to be announced.
